

google.com

Not secure google.com

Chat

User reports inability to access external websites.

Hmmm... can't reach this page

google.com's server IP address could not be found.

Try:

- Checking the connection
- Checking the proxy, firewall, and DNS settings

ERR_NAME_NOT_RESOLVED

Refresh

The issue was reported by one only 1 user. Other users/devices were not reported as affected, suggesting the issue is isolated to the user's workstation.

Reply from 172.16.0.100: Destination host unreachable.  
Reply from 172.16.0.100: Destination host unreachable.  
  
Ping statistics for 8.8.8.8:  
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),  
        0 bytes over 4 hops = 0 ms  
        Roundtrip times: 0 to 0 ms  
  
C:\Users\bsmall>ping google.com  
Ping request could not find host google.com. Please check the name and try again.  
  
C:\Users\bsmall>ipconfig /release  
  
Windows IP Configuration  
  
The operation failed as no adapter is in the state permissible for  
this operation.  
  
C:\Users\bsmall>
```

DHCP renewal fails because the network adapter is not configured for DHCP.

Inorder to configure settings now, I need to open command prompt as administrator

User Account Control ×

Do you want to allow this app to make changes to your device?

 Windows Command Processor

Verified publisher: Microsoft Windows

[Show more details](#)

To continue, enter an admin user name and password.

Domain: MYDOMAIN

My first step is to now run "netsh interface show interface" to list all network adapters on my system

```
C:\Windows\system32>
C:\Windows\system32>
C:\Windows\system32>netsh interface show interface
```

Admin State	State	Type	Interface Name
Enabled	Connected	Dedicated	Ethernet

```
C:\Windows\system32>netsh interface ipv4 set address name="Ethernet" source=dhcp
```

I then run a command to configure the ethernet adapter to automatically obtain its IP address and subnet mask to clear any manually set static IP configurations.

I then configure the Ethernet adapter to automatically obtain its DNS server addresses from the local DHCP server, clearing any manually set static DNS

```
C:\Windows\system32>netsh interface ipv4 set dns name="Ethernet" source=dhcp
```

```
C:\Windows\system32>ipconfig /renew
```

```
Windows IP Configuration
```

```
Ethernet adapter Ethernet:
```

```
Connection-specific DNS Suffix  . : mydomain.com
Link-local IPv6 Address . . . . . : fe80::d47b:a0f1:cdde:4a3f%4
IPv4 Address. . . . . : 172.16.0.100
Subnet Mask . . . . . : 255.255.255.0
Default Gateway . . . . . : 172.16.0.1
```

Last step is to force Windows computer to contact DHCP server and request a new IP address lease.

Administrator: Command Prompt

Enabled Connected Dedicated Ethernet

```
C:\Windows\system32>netsh interface ipv4 set address name="Ethernet" source=dhcp
DHCP is already enabled on this interface.
```

```
C:\Windows\system32>ping 8.8.8.8
```

```
Pinging 8.8.8.8 with 32 bytes of data:
```

```
Request timed out.
```

```
Reply from 8.8.8.8: bytes=32 time=14ms TTL=125
```

```
Reply from 8.8.8.8: bytes=32 time=16ms TTL=125
```

```
Reply from 8.8.8.8: bytes=32 time=10ms TTL=125
```

```
Ping statistics for 8.8.8.8:
```

```
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
```

```
Approximate round trip times in milli-seconds:
```

```
    Minimum = 10ms, Maximum = 16ms, Average = 13ms
```

```
C:\Windows\system32>ping google.com
```

```
Pinging google.com [142.250.137.102] with 32 bytes of data:
```

```
Request timed out.
```

```
Reply from 142.250.137.102: bytes=32 time=64ms TTL=125
```

```
Reply from 142.250.137.102: bytes=32 time=95ms TTL=125
```

```
Reply from 142.250.137.102: bytes=32 time=15ms TTL=125
```

```
Ping statistics for 142.250.137.102:
```

```
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
```

```
Approximate round trip times in milli-seconds:
```

```
    Minimum = 15ms, Maximum = 95ms, Average = 58ms
```

```
C:\Windows\system32>
```

Successful ping confirms the computer has Internet connectivity.
